

Whether for pleasure or endurance outdoor pursuits, sport, travel and adventure now take us to a greater diversity of environments, where the demands on the right type of clothing has never been so great.

We want performance clothing that is light, comfortable, durable and easy to care for but above all effective in managing perspiration. In extreme conditions that we're encountering more and more, it can mean the difference between life or death and well being.

In everyday use unisex Sub Zero Factor 1, Factor 2, Cool T and All Active performance garments form the basis of an integrated layered system. Highly breathable and totally effective in the management of perspiration; keeping your body feeling warm and dry as temperatures drop, cool and dry as temperatures rise.

A system of graded warmth that we know will work for you anywhere and when it matters most.

THE EFFECT IS THE SAME

SUB ZERO FACTOR 1  
PERFORMANCE BASE LAYER

**SHORT SLEEVE**

Unisex. S M L XL  
Average Weight 160g  
F 1 L S

**TURTLE NECK**  
Unisex. S M L XL  
Average Weight 160g  
F 1 T N

Factor 1 Tops feature set-in sleeves to maximise insulation and wicking. Flat stretch seams and seamless body for extra comfort.

Generous body length avoids lower back exposure.

#### ZIP TURTLE

Unisex. S M L XL  
Average Weight 175g  
F 1 ZT

Factor 1 Bottoms have generous high back to avoid lower back exposure.

Flat stretch seams for extra comfort.

#### LONG JOHN

S M L XL  
Average Weight 130g  
F 1 LJ

#### BLOO JOHN

Unisex. S M L XL  
No Fly Average Weight 130g  
F 1 BJ

All Factor 1 garments have built-in stretch (100% along width, 80% along length) allowing for a very close fit for most body shapes.

UV protection 35+

*Like a highly breathable second skin Factor 1 garments are designed to perform as super lightweight thermals keeping your body feeling dry and comfortable, free from perspiration and the harmful effects of 'sweat-chill' caused by the accumulation of sweat.*

*Our specially developed Factor 1 fabric, quickly wicks (transports) perspiration away from the body to the outer surface of the garment where it either evaporates or is 'picked-up' by a Factor 2 mid layer or outer shell. Such is the efficiency of Factor 1 that it*

*also helps to keep you cool in warmer weather by draining off excess body heat. Totally effective in action and like all Sub Zero performance clothing easy to care for, naturally anti-bacterial with UV protection, makes Factor 1 the essential 24/7 base layer for everyone, anywhere in the world.*

THE EFFECT IS THE SAME

# 2

SUB ZERO FACTOR 2  
PERFORMANCE MID LAYER

All Factor 2 garments have built-in stretch (80% along width, 30% along length) allows for a comfortable fit for most body shapes. Tog rating 0.72.

**ZIP TURTLE**  
Unisex. S M L XL XXL  
Average Weight 295g  
F 2 Z T

**LONG SLEEVE**  
Unisex. S M L XL XXL  
Average Weight 270g  
F 2 L S

Factor 2 Tops feature set-in sleeves to maximise insulation and wicking. Flat stretch seams and seamless body for extra comfort.

Generous body length avoids lower back exposure.

**LONG JOHN**  
S M L XL XXL  
Average Weight 255g  
F 2 L J

**BLOO JOHN**  
Unisex. S M L XL XXL  
No Fly. Average Weight 250g  
F 2 B J

Factor 2 Bottoms have generous high back avoids lower back exposure. Flat stretch seams for extra comfort.

**ONE PIECE SUIT**  
Unisex. S M L XL XXL  
Average Weight 420g  
F 2 O P S

*For these technical thermal mid-layer garments we have specially developed and manufactured our unique lightweight double sided Factor 2 fabric from advanced polyamide fibres with a harder wearing outer surface and a super soft brushed fleece-like inner.*

*Factor 2 garments quickly transports perspiration away from your skin, or when worn on top of Factor 1 garments, to its outer surface to disperse. At the same time the inner brushed fleece surface traps warm air to insulate the body keeping it dry and at a cosy, comfortable even temperature when all around you is below zero.*

*So effective is the performance of all Factor 2 garments protecting you from sweat and wind chill you will never want to take them off! Highly breathable plus outstanding wind resistance, Factor 2 has proven itself superior to mainstream polyester fleeces time and time in the severest climates.*

So what do we at Sub Zero know?

We know the the technology employed in all our performance clothing works. As with most of todays performance clothing manufactured from man made fabrics, despite claims to the contary not all garments perform as they claim.

That is why unlike most we have taken time and care in creating, developing and testing all our own fabrics using technologically superior polyamide fibres and that is why we know Sub Zero will work for you.

By choice Sub Zero performance clothing has been worn and proven on numerous high profile expeditions, sponsored sporting adventures, races and work programmes in some of the world's most hostile environments. A system technically superior at controlling and protecting you from the harmful efects of both sweat and wind chill - performance that keeps on working long after you stop.

Totally

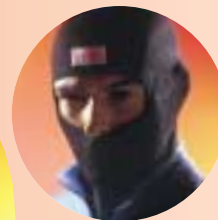

Effective

Our expertise is in developing technically advanced fabrics to create new performance orientated product. We currently have a innovative, totally water and windproof jacket plus an exciting All Active womens range under development. Visit our website for more infomation.

Cool T garments feature set-in sleeves to maximise wicking. Flat stretch seams and seamless body for extra comfort.

Generous body length avoids lower back exposure.

### LONG SLEEVE

Unisex. S M L XL

Average Weight 140g

CTLS

### ONE PIECE SUIT

Unisex. S M L XL

Average Weight 200g

CTOPS

As the temperature begins to soar you will long for a sensation like this. Manufactured from another of our specially developed easy care anti-bacterial bi-component (two layer) fabrics, we have designed Cool T for all high activity sporting pursuits.

Because of the very low heat retention of Cool T fabric along with very high factor UV protection, it delivers maximum physiological comfort so that you'll be able to keep your cool in the most heated of encounters.

The inner layer of Cool T fabric transfers perspiration rapidly away from the body to the more absorbent fine filament outer layer. Here moisture will 'flash' (spread) rapidly across the surface of the garment which speeds up evaporation.

The whole effect leaves your skin feeling much dryer and much cooler. In fact so efficient is the process it has proven to help sustain endurance in extreme heat.
